Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

1. Use-Case Model

2. Use-Case Specification

2.1 Use-case: Log in

Use-case ID	UC001
Use-case Name	Log in
Brief Description	This use case describes how an actor logs into the system to access their personalized dashboard and functionalities.
Actors	Guest
Basic Flow	The use case starts when the actor accesses the login page. 1. The system displays a login form that requires email address and password. 2. The actor inputs a valid email address and password. 3. The actor clicks on the “Đăng nhập” button.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	- The system validates the inputs. - The system announces sign in successfully. - Finally, the system will check the role of the account and direct the actor to the page corresponding to the account's role
Alternative Flows	Alternative flow 1: Invalid input - At step 4, if the system detects invalid email or password (left blank or incorrect form), an error message is displayed. - The actor is prompted to try again. Alternative flow 2: Cancel while login - The actor returns to the previous page while entering the information. - The system returns the actor to the home page without the actor being logged in.
Special Requirements	Response time should not exceed 2 seconds under normal load.
Pre-conditions	- The actor has already had an account in the system. - The actor has an internet connection.
Post-conditions	- If successful, the actor is successfully authenticated and redirected to their dashboard. - If unsuccessful, an error message is displayed.
Extension Points	Recover Password: At step 1 of the basic flow, the actor may have forgotten their password and click on the "Quên mật khẩu" button, the system redirects the actor to a password recovery page, the use case UC003 (Recover password) starts here.

2.2 Use-case: Sign up

Use-case ID	UC002
Use-case Name	Sign up
Brief Description	This use case allows a new user to create an account by providing personal information and verifying credentials.
Actors	Guest
Basic Flow	Use case begins when the actor accesses the sign-up page. - The system displays a form that requires such information: name, phone number, email, address, password, confirm password. - The actor fills in their account information to the form and clicks to Đăng kí button to confirm. - The system will check for the validation of the input and store the user's account information in the database in a pending verification state by marking the account as not verified. - The system starts the "Verify Account" use case (UC004). - The system announces successful registration and the account is created. The actor is directed to the sign-in page to log into the website with this account.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Alternative Flows	Alternative flow 1: Invalid input - At step 4, if the system detects any fields are left blank or email is invalid or username has already existed, an error message is displayed. - The actor is prompted to try again. Alternative flow 2: Cancel while login - The actor returns to the previous page while entering the information. - The system returns the actor to the home page without the user being logged in.
Special Requirements	Password must contain at least 8 characters, 3 numbers and 1 special character.
Pre-conditions	- The actor is not logged in. - The actor has internet connection.
Post-conditions	- If successful, an actor account is created and they can sign in. - If unsuccessful, an error message is displayed.
Extension Points	None

2.3 Use-case: Recover password

Use-case ID	UC003
Use-case Name	Recover password
Brief Description	This use case allows users to recover their accounts by verifying their identity through email.
Actors	Guest
Basic Flow	Use case starts when the actor selects the Quên mật khẩu button at the Sign-in page: - The system displays a form that requires an email address. - The user provides the email associated with their account and clicks the "Đổi mật khẩu" button to proceed.. - The system will check for the validation of the input (valid email address format) and send a reset password link to that email. - The user accesses their email inbox, clicks on the received reset link, and is redirected to the password reset page. - The system displays a form that requires a new password. - The actor prompts their new password and clicks the Đổi mật khẩu button to confirm. - The system confirms that the password has been successfully updated and informs the user of the successful reset. The actor will be directed to the sign-in page.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Alternative Flows	Alternative flow 1: Invalid email address - At step 4, if the system detects invalid email address, an error message is displayed. - The actor is prompted to try again. Alternative flow 2: Actor shall be not received reset password mail after 60 seconds - The system display Send again button. - The actor clicks Send again button and another confirmation mail is sent.
Special Requirements	- The verification link must be sent within 1 minute. - Users can request resending at most 5 times. - Password must contain at least 8 characters, 3 numbers and 1 special character.
Pre-conditions	- The actor has already had an account in the system. - The actor has an internet connection.
Post-conditions	- If successful, the actor regains access to their account. - If unsuccessful, an error message is displayed and account's password remains unchanged.
Extension Points	None

2.4 Use-case: Verify account

Use-case ID	UC004
Use-case Name	Verify account
Brief Description	This use case verifies a user's email in sign up process by sending a verification link.
Actors	Guest
Basic Flow	- The system sends an email to the user containing a unique verification link. - The system informs the actor that a verification email has been sent and that the account must be verified within 6 hours to become active. - The user accesses their email inbox, clicks on the received link. - The system receives the verification request, checks that the token exists and is valid (not expired) and marks the user's account as verified.
Alternative Flows	Alternative Flow 1: Expired verification token - The system determines that the verification token has expired (more than 24 hours old). - The account remains inactive and its information will be removed. Alternative flow 2: Actor shall be not received verification email after 60 seconds - The system display Gửi lại button. - The actor clicks Gửi lại button and another verification email is sent.
Special Requirements	The verification link must be sent within 1 minute.
Pre-conditions	The system has validated user's sign-up information..
Post-conditions	- If the user verifies the account within the allowed time period: - The account is marked as verified .

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	○ The user is able to log in and access the system. ● If the user does not verify the account within 6 hours: ○ The account remains unverified ○ The account may be prevented from logging in and deleted.
Extension Points	None

2.5 Use-case: Search products by name

Use-case ID	UC005
Use-case Name	Search products by name
Brief Description	This use case allows the actor to find products by entering a product name keyword.
Actors	Guest, Customer (registered user)
Basic Flow	1. The actor navigates to the search section on the page header. 2. The actor enters a keyword into the search field. 3. The actor clicks the “Tìm kiếm” button. 4. The system validates that the keyword is not empty. 5. The system searches the product database for items whose names match the keyword. 6. The system displays the list of matching products.
Alternative Flows	Alternative flow 1: No results found 1. At step 5, the system finds no products which names match the keyword. 2. The system displays a message “No products found”. Alternative flow 2: Empty input 1. At step 2, the actor left the search field blank. 2. The system prompts the user to enter a keyword..
Special Requirements	● Results must be displayed within 10 seconds under normal load.
Pre-conditions	● The actor has an internet connection.
Post-conditions	● A list of products matching the search keyword is displayed to the actor.
Extension Points	None

2.6 Use-case: Browse products by category

Use-case ID	UC006
Use-case Name	Browse products by category
Brief Description	This use case allows users to explore category-specific products. (e.g. Bracket, Backpack)
Actors	Guest, Customer (registered user)
Basic Flow	1. The user clicks on a product category from the homepage or product navigation menu. 2. The system fetches all products that belong to the selected category. 3. The system displays the products, along with filters such as price range, brand, branch available.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Alternative Flows	Alternative flow 1: Category is empty - At step 2, the system finds no products belong to this category. - The system displays a message such as “No products found in this category.”
Special Requirements	Results must be displayed within 10 seconds under normal load.
Pre-conditions	The actor has an internet connection.
Post-conditions	A list of category-specific products is displayed to the actor.
Extension Points	Filter Products: At step 3 of the basic flow, during browsing, the user may choose to filter the product list, the use case UC007 (Filter products) starts here. View details of products: At step 3 of the basic flow, the user may click on a product for more details, the use case UC008 (View detail of products) starts here.

2.7 Use-case: Filter products

Use-case ID	UC007
Use-case Name	Filter products
Brief Description	This use case allows users to apply filters such as price range, brand, or store location to narrow down the list of visible products while browsing.
Actors	Guest, Customer (registered user)
Basic Flow	The use case starts when the actor accesses category-specific products page. - The user interacts with the filter sidebar displayed on the left side of the product grid, selects one or more filter options from the available controls, such as: - Price range (e.g., below 1,000,000 VND, 1–2 million VND) - Brand checkboxes (e.g., Yonex, Lining, Victor) - Store location checkboxes (e.g., SCD Quận 1, SCD Premium) - The system processes the selected filters and updates the product list. - The product grid refreshes to display only products that match the selected criteria.
Alternative Flows	Alternative Flow 1: No products match selected filters - At step 2, the system finds no matching products. - The system displays a message such as “No matching products found.” Alternative Flow 2: User clears all filters - At step 1, no filters are chosen or the user clears all filters. - The system resets the product list to show all items in the current category.
Special Requirements	- Results must be displayed within 10 seconds under normal load. - Filtering should occur without full page reload. - Multiple filters may be combined.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Pre-conditions	- The actor has an internet connection. - The user is currently browsing a product category (UC005).
Post-conditions	The product grid is updated based on user-defined filters.
Extension Points	None

2.8 Use-case: View details of products

Use-case ID	UC008
Use-case Name	View details of products
Brief Description	This use case allows users to view detailed information about a specific product such as specifications, price, images, availability, and customer reviews.
Actors	Guest, Customer (registered user)
Basic Flow	- The use case starts when the user selects a product from a search result, homepage, or category list. - The system retrieves the detailed product data (name, ID, brand, price, availability, images, specifications, reviews) from the database. - The system displays the Product Details Page, which includes: - Product Image Gallery (main image + thumbnails). - Product Purchasing Block (price, variant selector, option selector, quantity selector, Add to Cart, Buy Now). - Product Description section. - Ratings & Reviews section. - The user interacts with the page by: - Clicking thumbnail images → system updates the main image. - Selecting a variant (e.g., color) → system updates the product gallery. - Selecting an option (e.g., size) → system registers the choice. - Adjusting the quantity using + / -. - Clicking “Thêm vào giỏ hàng” → system adds the product with the chosen attributes to the cart. - Clicking “Mua ngay” → system adds the product and navigates directly to the cart. - Scrolling down to view product description and reviews. - The user may return to the previous page, continue browsing, or proceed with purchase-related actions.
Alternative Flows	Alternative flow 1: Product not found - At step 2, if the product ID is invalid or the product no longer exists, the system will notify the user that the product cannot be found. - The user selects another product. Alternative flow 2: Out of stock

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	At step 3, if the product status is “Out of Stock,” the system disables the Add to Cart and Buy Now buttons.
Special Requirements	- Product details must be loaded within 2 seconds under normal network conditions. - The review section should allow scrolling if there are multiple reviews.
Pre-conditions	- The product is available in the catalog. - The system is operational. - The user has an internet connection.
Post-conditions	- The user has successfully viewed the product details. - The user may proceed to interact with other product-related functions such as add to cart, buy now,...
Extension Points	None

2.9 Use-case: Manage cart

Use-case ID	UC009
Use-case Name	Manage cart
Brief Description	This use case allows users to manage their shopping cart such as add, remove or edit the quantity of products before proceeding to checkout.
Actors	Customer (registered user)
Basic Flow	The use case starts the user interacts with the shopping cart: - The user selects a product and adds it to the cart. - The system prompts for product options. - The system adds the product to the user’s cart. - The user navigates to the cart interface. - The system displays all items currently in the cart. - The user can interact with each product in the cart through various actions: updating the quantity (by tapping the plus or minus buttons), removing the product (by clicking the trash icon). - The system updates the cart and reflects the total cost.
Alternative Flows	Alternative flow 1: Add products beyond available quantity - At step 3, if the selected quantity exceeds current stock, the system will notify that the product quantity does not match. Alternative flow 2: Product no longer available - At step 5, if a product in the shopping cart is no longer available, the system will notify the user and provide the option to remove the product.
Special Requirements	Cart data must be displayed within 10 seconds under normal load.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	The system will automatically recalculate the total value when there is a change.
Pre-conditions	- The user is logged into the system. - The user has an internet connection.
Post-conditions	- The cart is updated according to the user's actions. - The user may proceed to checkout or continue shopping. - Cart state is saved.
Extension Points	None

2.10 Use-case: Track orders

Use-case ID	UC0010
Use-case Name	Track Orders
Brief Description	This use case describes how a registered user can view and track the status and progress of their orders in the system.
Actors	Customer (Registered User)
Basic Flow	The use case begins when the actor accesses the “Lịch sử mua hàng” page via the “Tra cứu” icon on the navigation bar: - The system displays a list of the user's orders. - The actor selects an order from the list - The system retrieves order details including status, delivery progress and order summary. - The system displays the tracking information such as shipping stage, estimated delivery date, delivery information, order items.
Alternative Flows	Alternative flow 1: No orders have been placed yet. - At step 1, if the customer has not placed any orders, the system will notify that no order has been placed. - Customers must place at least one order to be able to track. Alternative flow 2: Tracking not available yet. - In step 3, if the order has not been sent or is in preparation, the system will notify the user to track as soon as the order is sent.
Special Requirements	- The system must respond within 2 seconds under normal load. - Tracking data must reflect real-time shipping status.
Pre-conditions	- The user must be logged into the system. - The user must have at least one placed order.
Post-conditions	- The system displays up-to-date tracking and order information. - The actor does not make any changes to order data.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Extension Points	None
------------------	------

2.11 Use-case: Cancel orders

Use-case ID	UC011
Use-case Name	Cancel orders
Brief Description	This use case allows a registered user to cancel an order if the system allows cancellation based on order status and business rules.
Actors	Customer (Registered User)
Basic Flow	The use case starts when user wants to cancel order through the order tracking interface: 1. The user accesses the “Lịch sử mua hàng” page. 2. The system displays a list of all the user’s orders. 3. The user selects an order that is in a cancellable status. 4. The user clicks the “Hủy đơn hàng” button. 5. The system asks the user to confirm the cancellation. 6. The user confirms the action. 7. The system updates the order status to Cancelled. 8. The system notifies the user that the cancellation was successful.
Alternative Flows	Alternative flow 1: Order not cancellable 1. At step 3, if the selected order has already been delivered, the system will notify that the order cannot be cancelled. Alternative flow 2: User cancels the cancellation 1. At step 6, if the user cancels the confirmation, the system will cancel the operation and return to the order tracking page.
Special Requirements	• The system must only allow cancellation if the order status is eligible.
Pre-conditions	• The user is logged into the system. • There is at least one order placed by the user.
Post-conditions	• The order status is updated to Cancelled. • The user is notified of the change. • The order will no longer be delivered.
Extension Points	None

2.12 Use-case: Request consultation

Use-case ID	UC012
Use-case Name	Request consultation

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Brief Description	This use case allows users to submit a consultation request regarding a product, enabling them to ask for advice or product clarification.
Actors	Guest, Customer (Registered User)
Basic Flow	The use case starts when the user navigates to contact page: 1. The system displays a consultation form. 2. The user will fill in basic information and the content that needs to be consulted. 3. The user submits the request. 4. The system validates, saves consultation requests and notifies admin. 5. The system confirms to the user that the request has been submitted.
Alternative Flows	Alternative flow 1: Missing required information 1. At step 3, if any required field is left blank, the system will prompt the user to complete it before submission. Alternative flow 2: Submission failed 1. In step 4, if the request fails to save, because of network error or server error for example, the system will notify the user to try again.
Special Requirements	• The user will receive a confirmation email if the email provided is correct. • Consultation requests must be stored in the system for tracking.
Pre-conditions	• The user is accessing the consultation feature from the contact interface. • The system is online and capable of processing requests.
Post-conditions	• The consultation request has been successfully saved and sent for review. • The user receives confirmation of their request. • The administrator views the request and responds via the backend system.
Extension Points	None

2.13 Use-case: View order history

Use-case ID	UC013
Use-case Name	View order history
Brief Description	This use case allows users to view their purchase history, including previously completed orders and details related to this order.
Actors	Customer (Registered User)
Basic Flow	The use case begins when the user navigates to the “Order History” section via the “Tra cứu” icon: 1. The system will retrieve completed or processed orders associated with the user's account. 2. The system displays a list of order history, sorted by most recent first. 3. The user selects a completed order to view.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	- The system will display full order information such as product name, quantity, price, order date and order status. - The user can perform actions such as repurchasing, rating an order, or requesting an exchange or return.
Alternative Flows	Alternative flow 1: No order available - At step 2, if the user has not placed any orders, the system notifies you that you have no orders. Alternative flow 2: Error while retrieving order - At step 4, if the system fails to load order details due to an error, it will notify the user to try again later.
Special Requirements	Only authenticated users can view their own order history. (Secure access)
Pre-conditions	- The user is logged in. - The user has placed at least one order in the past.
Post-conditions	- The user views a list of their orders. - Users can perform actions such as repurchasing, reviewing orders, or exchanging/returning products within the allowed time period.
Extension Points	None

2.14 Use-case: Change profile information

Use-case ID	UC014
Use-case Name	Change profile information
Brief Description	This use case allows customers to view and update their profile information including name, gender, date of birth, email, phone number, and profile picture. The system ensures secure handling of sensitive information and validation of user input.
Actors	Customer
Basic Flow	- User click on the profile avatar icon (top-right corner). - From the dropdown, the customer selects "My Account". - The system displays the current profile information: username (not editable or only editable once), name, password (masked and changeable via "Change" link), email (masked and changeable via "Change" link), phone number, gender, date of birth, profile picture. - The customer clicks on the text fields or selection inputs to edit their details. - The customer clicks the "Save" button. - The system validates the information. If valid, the profile is updated. - The system displays a success message "Profile updated successfully".

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Alternative Flows	Alternative flow 1: Missing required fields (e.g., name, gender) - At the form submission step, if any required field (e.g., name, gender) is missing, the system displays an error message. - The actor is prompted to complete the missing information before proceeding. Alternative flow 2: Image too large or wrong format - When the actor uploads an image, the system checks the file size and format. - If the image exceeds the allowed size or is not in .jpeg or .png format, the system blocks the upload and displays: "Only .jpeg or .png files under 1MB are allowed." Alternative flow 3: Customer cancels edits - If the actor clicks Cancel while editing, the system resets the form to the previously saved state. - No changes are applied, and the actor returns to the initial view.
Special Requirements	- Email is partially masked (for privacy) and editable via verification. - Username can only be changed once. - Avatar upload supports .jpeg, .png only; file size limit: 1MB.
Pre-conditions	The user is logged in with an authenticated session.
Post-conditions	The updated profile information is saved and shown.
Extension Points	None

2.15 Use-case: Return and exchange products

Use-case ID	UC015
Use-case Name	Return and exchange products
Brief Description	This use case allows customers to submit a request to return or exchange a product within 7 days of receiving the order.
Actors	Customer (Registered User)

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

Basic Flow	The use case start when actor access order history page. 1. Actor select a completed order with the status "Delivered". 2. Actor click the "Return/Exchange" button next to the item. 3. The system displays a form with: product details, a list of pre-set return reasons for customers to tick and reason detail form. 4. After submitting, the system will display success message.
Alternative Flows	Alternative flow 1: No reason selected 1. At the reason selection step, if the actor attempts to submit the form without choosing a return reason, 2. The system prompts the message: "Please select a reason for return." 3. The actor must select a reason to continue.
Special Requirements	• Only authenticated users can initiate return/exchange requests.
Pre-conditions	• Customer has a valid account and has received an order. • The order is marked as "Delivered" and within 7 days.
Post-conditions	• The return/exchange request is recorded in the system and associated with the customer's order.
Extension Points	None

2.16 Use-case: Proceed to buy

Use-case ID	UC0016
Use-case Name	Proceed to buy
Brief Description	Allows a customer to review the items in their cart, provide shipping and payment information, and finalize their purchase.
Actors	Registered User
Basic Flow	The use case starts when the user access shopping cart page:

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	1. The customer reviews the cart and clicks the "Checkout" button. 2. The system displays the checkout page, pre-filling the customer's default shipping address and showing the available shipping methods. 3. The customer confirms the shipping address and selects a shipping method. 4. The customer proceeds to the payment step. 5. The customer selects a suitable delivery option. 6. The customer reviews the final order summary, including items, shipping cost, and total price. 7. The customer clicks the "Place Order" button. 8. The system validates the information, creates the order record, updates product inventory. 9. The system displays a success message with the order ID and details.
Alternative Flows	Alternative flow 1: At step 2 – Item in the cart becomes unavailable 1. At step 1, the system detects that one or more items are out of stock. 2. The system displays a notification: “One or more items are no longer available.” 3. The system prevents checkout from proceeding until the unavailable items are removed from the cart. Alternative flow 2: Customer adds or edits a shipping address 1. At step 3, the customer chooses to add a new address or edit an existing address. 2. The system displays the address form for input or modification. 3. The customer saves the updated or new address, and the system applies the change for the current order.
Special Requirements	• The checkout page must load within 2 seconds. • The final payment processing and order confirmation step must complete within 5 seconds • All personal information must be transmitted securely over HTTPS.
Pre-conditions	• The user is logged into the system. • The user has one or more items in their shopping cart.
Post-conditions	• An order record is created in the system with a status of "Processing", linked to the customer's account. The record contains the final shipping address, items, and total cost.
Extension Points	None

2.17 Use-case: Review and rating products

Use-case ID	UC0017
Use-case Name	Review and rating products
Brief Description	This use case allows registered users to submit reviews and ratings for products they

SCD - BADMINTON STORE WEB APP	Version: 1.1
Use-Case Specification	Date: 30/07/2025
group 06 use case specification v1.1	

	have purchased.
Actors	Registered User
Basic Flow	- The user navigates to “Tra cứu → Lịch sử mua hàng” and selects a completed order. - The system displays a list of purchased orders with different statuses such as “chờ xác nhận”, “đang giao”, “hoàn thành”, etc. - The user selects an order with the status “Hoàn thành” and clicks the “Đánh giá” button. - The system displays the Rating Section, which includes: - Title “Đánh giá sản phẩm” with the message “<i>Share your thoughts about the product in this order.</i>” - Product information (image, name, version). - Star rating field (1–5). - Comment box. “Hủy” and “Đánh giá” buttons. - The user enters a star rating (1–5), writes a mandatory comment, and then clicks “Đánh giá” - The system validates the input and processes it: - If valid: saves the review, links it to the product and the user account, and displays the notification: “<i>Thank you for your review!</i>” - If the product has already been reviewed by the user: the system displays the notification: “<i>You have already reviewed this product.</i>” - If the user does not select a rating or does not write a comment: the system displays the notification: “<i>Please provide a star rating and a comment for the product.</i>”
Alternative Flows	Alternative flow 1: Product not eligible for review - In step 3, if the selected product has not been delivered or the evaluation time has expired, the system will display a message that the product is not eligible for evaluation. Alternative flow 2: Missing rating - At step 5, if the user submits the review without selecting a rating, the system displays an error: “Rating is required.” - Users will have to rate (1-5 stars) to be able to submit a review.
Special Requirements	- The order must have the status “Hoàn thành” - Only authenticated customers who purchased the product can post a review.
Pre-conditions	- The user is logged into the system. - The user has received the product successfully. - The product has not already been reviewed by the user.
Post-conditions	- The system records the review and rating linked to the product and the user account. - The review becomes visible on the product detail page.
