Vision (Small Project)

1. Introduction

The purpose of this document is to collect, analyze, and define the high-level requirements and core features of the **SCD - Badminton Store Web App**. This web-based application is designed to support the management and online sales of badminton products such as rackets, shuttlecocks, sportswear, and accessories. The document focuses on identifying the needs of stakeholders and end users, explaining why these needs exist, and how the system will address them. Functional and non-functional details will be further elaborated in the use-case and supplementary specifications.

1.1 References

In this section, the document refers to platforms and materials used during the development of the SCD - Badminton Store Web App, as mentioned in Alternatives and Research Sources, including:

- ShopVNB - Online Badminton Store: <https://shopvnb.com/>
- Week 4 - Requirements Engineering Slides

After conducting research on several online badminton stores, we found that ShopVNB stands out due to its professional layout, intuitive user interface, and complete product categorization. This platform served as a reference for structuring the features and user flow of our system.

Additionally, the Week 4 slides on Requirements Engineering from the Software Engineering course at the University of Science provided essential guidance for identifying and documenting both functional and non-functional requirements.

2. Positioning

2.1 Problem Statement

The problem of	Badminton players struggling to find and access high-quality, authentic badminton products along with reliable technical services (such as professional stringing, racket/shoe consultations, etc.)
affects	Badminton players from casual to professional levels, and the broader sports-loving community

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

the impact of which is	Players may end up buying counterfeit or low-quality products at high prices without proper service, resulting in poor user experience and lack of trust
a successful solution would be	Establishing a professional retail system that provides a wide range of authentic badminton products at reasonable prices, supported by expert staff and thoughtful after-sales service

2.2 Product Position Statement

For	Badminton players of all levels, from casual to competitive
Who	Seek access to trustworthy, high-quality badminton products and services
SCD	Is a badminton store website
That	Delivers authentic badminton gear, modern stringing services, expert consultation, and a professional shopping experience
Unlike	Small unreliable shops or general e-commerce platforms that lack badminton specialization
Our product	Is a dedicated retail system that provides a comprehensive badminton shopping experience, with guaranteed quality, certified technical service, and continuous innovation to serve the badminton community in Vietnam

3. Stakeholder and User Descriptions

3.1 Stakeholder Summary

Name	Description	Responsibilities
Developer Team	The group responsible for the technical development and implementation of the website. (Group 06 - 23CLC08)	Design, build, test, deploy the website. They are also responsible for maintaining the system's infrastructure, security, and functionality.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

Professor	Academic or professional guides who oversee the project and provide expert advice.	Provides guidance and mentorship, review project milestones, ensure project standards are met, and evaluate the final product.
Badminton Player/Customer	Person who plays badminton and wants to buy badminton products	Ensure the system will meet the needs of players.
Store Manager	Who manages badminton product	Ensure the form of product purchase for their goods.
Administrator	Administrator operates the platform and supports user	Regularly checks for the status of the website and resolves reports from users. Ensures products, user's activities meet the terms and policy of the platform.

3.2 User Summary

Name	Description	Responsibilities	Stakeholder
Customer	The primary user of the system, including both guest visitors and registered members. They access the website to find and purchase badminton products.	Search for and view products, add products to the cart, place orders and complete payment, write product reviews, manage their personal account and view order history (for registered members).	Self-represented
Administrator	The store manager or an authorized staff member responsible for managing the backend operations of the website.	Manage products (add/edit/delete), manage inventory (update stock levels), process orders (confirm, ship, cancel), manage user accounts, manage website content (e.g., blog posts, promotions), view reports.	Self-represented

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

3.3 User Environment

A **Customer** can be either a logged-in user or a guest (not logged in). However, only logged-in users are allowed to make purchases, while guests can browse products and view information but cannot complete transactions.

Typically, each shopping session involves a single individual and can last from 2–5 minutes for a quick purchase to 15–30 minutes when browsing, comparing products, and reading reviews. Customers may access the website from various locations such as home, work using PCs, laptops.

Administrator can be a single individual or a small team (usually 1-3 people) responsible for managing store operations. Their tasks are performed on a daily basis and include managing user accounts, processing orders which may take 5-10 minutes per order and updating products or inventory, typically done weekly or whenever new stock arrives. They also generate reports which help identify buyer's hobbies, and support decision-making for overall business improvement. Administrators usually work in an office or store environment using desktop or laptop computers for better efficiency.

Customers and **Administrators** primarily access the system via modern web browsers on Windows, Linux or macOS.

PayPal integration will be available as a secure payment option. The system will also send email notifications for important actions such as user registration and order confirmation. Looking ahead, future updates will focus on developing a scalable and adaptive design that ensures a consistent user experience across all platforms and devices.

3.4 Summary of Key Stakeholder or User Needs

Need	Priority	Concerns	Current Solution	Proposed Solutions
Easy to find and compare products	High	Customers waste time trying to find the right equipment	Finding products by name and brand	Applying filter of price, size, technical specifications, demand, ...
Secure and convenient purchasing	High	Customers are afraid of online payment.	Paying directly at a physical store or paying on receiving	Open online payment for ship-order

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

Efficient order and inventory management	High	Manual tracking leads to stock errors (overselling).	Using spreadsheets to track inventory. Taking orders via phone calls or social media messages.	An admin dashboard that provides a centralized view of all orders, automates stock updates after each purchase, and helps manage the entire order fulfillment process.
--	------	--	--	--

3.5 Alternatives and Competition

- Selling badminton products via physical store/social media:

Many small businesses continue to rely on selling through a physical store and taking orders informally via social media platforms such as Facebook or Instagram. This method requires no additional development costs and allows for personal interaction with customers. However, it is highly manual, prone to errors, and lacks trust. Furthermore, it limits market reach and does not present a professional brand image, which may reduce customer trust and long-term growth potential. Selling through physical locations is often not ideal for introverted people or those with busy schedules who may not have the time to go to the store.

- Using a general e-commerce marketplace (Shopee, Lazada):

Shopee, Lazada offer access to a large and active customer base, with built-in systems for payments, logistics, and customer support. The entry barrier is low, making it easy for new sellers to get started. However, intense competition, high commission fees, and limited control over branding and user experience make it difficult to stand out or build strong customer loyalty.

4. Product Overview

This section provides a high-level view of the **SCD - Badminton Store Web App**'s capabilities, its interfaces with other components, and its system configuration. This section consists of two subsections.

4.1 Product Perspective

The **SCD - Badminton Store Web App** is a platform that enables users to search for, select, and purchase specialized badminton equipment. The system focuses on providing a simple and intuitive user experience, while also offering efficient management capabilities for administrators.

The application shall integrate third-party services such as **Google Maps API** to display store locations and **email services** to verify users during the registration process, buying process.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

Users are categorized into three roles: **Guest** (unauthenticated user, who can browse products), **Customer** (logged-in customer, who can browse products, place orders, and view order properties), **Administrator** (manage product, order processing, and user account)

The system operates independently and uses its own dedicated database to store product data, order records, and user information.

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

4.2 Assumptions and Dependencies

- The application is designed to perform optimally on modern web browsers such as **Google Chrome**, **Mozilla Firefox**, **Microsoft Edge**, or other **Chromium-based browsers**.
- The application is expected to remain in production for at least **4-5 years** and will be regularly updated to keep up with evolving customer needs and technical advancements.
- The development team initially focuses on delivering a desktop version of the application, mobile-friendly versions may be implemented in subsequent phases.
- If there are any significant modifications during the development process, the vision document will be updated to reflect those adjustments.

5. Product Features

No.	Feature	Description	Priority
1	User login, registration	The system shall allow users to securely log in, register new accounts.	High
2	Search and filter products	The system shall allow customers to search products via a search bar and filter them by attributes such as price, brand available.	Medium
3	Add products to shopping cart	The system shall allow customers to add one or more products to their shopping cart which is a list of products they want to buy.	High
4	Manage shopping cart	The system shall allow customers to view product quantity, variant, and unit price in the shopping cart. Users shall be able to remove items, see the total price, and proceed to buy.	High
5	View details of products	The system shall allow customers to view full product information. Each product shall display images, prices of all variants, and an overall description.	High
6	Track orders	The system shall allow customers to track the	Low

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

		status and delivery progress of their placed orders.	
7	Product review and rating	The system shall allow customers to submit reviews and ratings for products they have purchased.	Low
8	Manage products	The system shall allow administrators to create, update, and delete product information displayed on the website.	High
9	View sale reports	The system shall allow administrators users to view an analytics dashboard that visualizes sales data, customer behavior, and inventory trends.	Medium
10	Request consultation	The system shall allow customers to submit inquiries via a contact form.	Low
11	Order management	The system shall allow administrators users to view, update, confirm, or cancel customer orders.	High
12	Cancel orders	The system shall enable customers to cancel orders prior to shipping and allow administrators to manage cancelled orders and process refunds as required.	Low
13	Promotion, sale-off management	The system shall allow administrators users to configure and schedule discounts or promotional offers for selected products.	Low
14	User management	The system shall allow administrators to create, view, edit, and delete user accounts and permissions, and maintain user profile information.	Medium
15	Change profile information	The system shall allow customers to create and manage their profiles with personal information, profile pictures	Medium

SCD - BADMINTON STORE WEB APP	Version: 1.1
Vision Document	Date: 27/06/2025
group06 vision document v1.1	

16	Return and exchange	The system shall allow customers to request a return or exchange of products within 7 days from the delivery date. The system shall allow users to select reasons for return, upload evidence and track the status of their return/exchange requests.	Medium
17	Shipping management	The system shall allow administrators to update the current shipping status retrieved from the delivery service provider, such as “Waiting for Pickup” or “In Transit.”	Low

6. Non-Functional Requirements

6.1 Platform requirements

- The system shall be compatible with 3 popular operating systems, including Windows, macOS, and Linux. Users shall be able to access the application through modern web browsers such as Google Chrome, Mozilla Firefox, Microsoft Edge, Cốc Cốc.

6.2 Performance requirements

- The system shall load the homepage in less than 2 seconds under normal network conditions.
- Product search results shall be returned in under 1 second for queries involving less than 1000 items.
- The system shall be capable of handling concurrent access by a minimum of 100 users.

6.3 Robustness requirements

- The system shall handle invalid user inputs without crashing.

6.4 Usability requirements

- The system shall display meaningful error messages for invalid inputs (wrong username, wrong password)
- Buttons and links shall be clearly distinguishable and easy to interact with.
- The system shall provide a search bar with keyword suggestions.
- The application shall provide a clear navigation bar with links to Home, Products, Cart, Account, Contact and Policy.

6.5 Hardware requirements

None.

6.6 Environment requirements

None.
